SUMMARY

Backend Software Developer with extensive experience building scalable Java microservices, data ingestion systems, and cloud platforms. Skilled in moving legacy systems to Java 21 and designing clean API architectures. Experienced working with AWS, Spring Boot, Kafka, and GenAI platform tools.

TECHNICAL SKILLS

Languages: Java, SQL

Frameworks: Spring Boot, Spring Security, Spring Cloud, Hibernate, JPA, MCP, LangGraph

Microservices & Messaging: Kafka, Redis, REST APIs

DevOps / CI-CD: Maven, Jenkins, GitLab CI, SonarQube

Cloud / Containers: AWS, Kubernetes, Docker, Firebase

Databases: MySQL, PostgreSQL, Firebase Realtime DB

Tools: Git, Postman, IntelliJ IDEA

EXPERIENCE

Software Engineer – Data Ingestion Service

Jan 2026 – Present

Tata Consultancy Services (Client: Ericsson)

Hyderabad, India

- Updating core data ingestion services to **Java 21** to improve multi-threading performance and code efficiency.
- Built new REST APIs to handle incoming customer data streams, boosting data onboarding speed by 30%.
- Used **AWS S3 as a Data Lake** to store multi-terabyte data, cutting data search and retrieval times by 15% using clean folder partitioning.
- Worked with the team to ensure 99.9% uptime for backend systems handling large-scale network data.

Java Backend Developer

Apr 2025 – Dec 2025

Tata Consultancy Services (Client: Nutanix)

Hyderabad, India

- **Project: NCM Cost Governance** – Worked on a multi-cloud platform that tracks real-time costs for AWS, Azure, and GCP, helping clients find up to 20% in wasted cloud spend.
- Designed and improved REST APIs for budget tracking, automated cloud resource saving, and cost forecasting.
- Led the migration of distributed microservices from Java 8 to Java 21, reducing memory usage and optimizing garbage collection speed.
- Wrote unit tests using JUnit and Mockito to reach 85%+ code coverage, drastically reducing bugs before production releases.

Platform Engineering – GenAI & Java Developer

Jul 2022 – Mar 2025

Tata Consultancy Services

Hyderabad, India

- **Project: Platform Engineering** – Built a self-service internal portal to automate cloud setup (VMs and storage), cutting infrastructure delivery times by nearly half.
- Developed independent microservices using Redis for quick caching, EFK for log management, and Kafka for event-driven messaging.
- Handled secure service-to-service communication using Spring Security, OAuth2, and Keycloak integrations.
- **GenAI Platform Work:** Built the backend for an internal *GenAI-as-a-Service* tool that lets teams easily deploy and scale AI models on Kubernetes clusters.

EDUCATION

SASTRA University

2018 – 2022

B.Tech in Computer Science and Engineering (CGPA: 8.57)

Thanjavur, India

ACHIEVEMENTS

- Created and launched the “BeingVaidya” Android app, growing it to 20,000+ active users with a 4.7-star rating on Google Play.
- Built and launched the “Yukti” application, gaining 100 paid subscribers by rolling out user-focused updates quickly.
